

CRYOPRESERVED CORD TISSUE INJECTABLE

BIOLOGICAL TREATMENT FOR INTRA-ARTICULAR INJECTION

WHY CORD TISSUE?

SurCord[®] is derived from human umbilical cord which is a rope-like structure that connects the fetus to the placenta. Its benefits and properties provide a wide variety of therapeutic applications in regenerative medicine. It contains higher concentrations of heavy chain-hyaluronic acid (HA) compared to amniotic membrane tissue.

NATURAL

SurCord[®] is manufactured from cord tissue taken from donated human placental tissue.

HEAVY CHAIN-HA

Research shows that cord tissue is prevalent in heavy chain-hyaluronic acid/Pentraxin-3 Protein Complex.

CRYOPRESERVED

Cryopreserving the allografts preserves the tissue's natural therapeutic benefits.

IMMUNE EVASIVE

Cord tissue is immune evasive, making it ideal for injection without illiciting host reactions.

WHY SURCORD[®]?

Unmatched quality standards coupled with innovative science sets us apart.

SurCord[®] is produced using our proprietary surgical process. This process extracts the cord tissue from the placental tissue, which is then processed into an injectable product. This process is a tightly controlled surgical procedure regulated under Section 361 of the Public Health Service Act. SurCord[®]'s minimally manipulated process retains the therapeutic properties of the cord tissue so that it can be used in a variety of treatment applications with ease. This process generates the highest quality cord tissue product on the market.

Product Information

Learn more about SurCord[®]

SurCord[®] is regulated under Section 361 of the Public Health Service Act and is intended for homologous use.

Potential SurCord[®] Applications

- + Orthopaedics
- + Podiatry
- + Sports Medicine
- + Pain Management

What is SurCord[®]?

SurCord[®] is an injectable cord tissue allograft that is derived from a donated placenta obtained via C-section delivery. It is cryopreserved to retain its therapeutic properties and benefits of the umbilical cord.

Hyaluronic Acid Amount

Measured in ng/mL

Potential SurCord[®] Benefits

Natural
Cryopreserved
Immune-Evasive
Heavy Chain-HA

Is SurCord[®] Safe?

SurCord[®] is thoroughly tested for safety and efficacy. We pride ourselves on safety standards that exceed regulatory requirements by performing additional serological and endotoxin tests missed by our competitors.

Vial Sizes

SurCord[®] comes in two vial sizes tailored to a variety of injection locations

Vials shown are not to scale

Inspected for Quality

All vials are measured using a calibrated electronic pipette, and Quality Assurance personnel individually inspects all filled vials to ensure they meet our unparalleled standards.
